

For Immediate Release

Hamamatsu Photonics adopts Teseda Platforms for Failure Analysis Systems

PORTLAND, OR-October 24, 2007 – Teseda Corporation, a leading provider of comprehensive scan-based diagnostic and debug solutions for semiconductor yield improvement, announced that Hamamatsu Photonics K.K will adopt its V-series hardware DFT test platforms as an option in their Semiconductor Device Failure Analysis systems. INTER ACTION Corporation, Teseda's manufacturing partner and leading distributor of Teseda products for Japan and Asia, will work with Hamamatsu Photonics to provide the platforms.

“The V-Series DFT tester was selected by Hamamatsu Photonics partly due to the small footprint, about the size of a sheet of paper,” stated Masao Kimura, INTER ACTION's President. “The Teseda solution also met the requirements of ease of use and rapid failure analysis capability.”

“The Teseda V520 platform has been used for several years in a failure analysis capacity, stated Armagan Akar, Teseda's CEO. “We are pleased that Hamamatsu Photonics has standardized on Teseda V-series as an option for their Failure Analysis systems. They will create a system that will provide drastic time reduction in diagnosis and analysis for their customers.”

The Teseda DFT platform, together with the Teseda diagnostic tools, will allow Hamamatsu Photonics to provide a complete failure analysis solution to the market.

Teseda will exhibit the V-series platforms and the full line of diagnostic software at the 2007 International Test Conference as well as the 2007 International Symposium on Testing and Failure Analysis (ISTFA) in November.

About Teseda Corporation

Teseda provides a unifying software and hardware environment that allows multiple engineering disciplines to accelerate the delivery of first silicon. Teseda's software solutions deliver comprehensive diagnostic and debug capabilities that resolve yield limiting failures, reducing the time to volume production. Teseda is headquartered in

Portland, Oregon. For more information about Teseda, its products and distribution network, please call 503.223.3315 or visit www.teseda.com

About INTER ACTION Corporation

INTER ACTION is a Japanese public company (listed on Mothers, Tokyo Stock Exchange Market) that develops and manufactures illuminators for testing, SOC, CCD and CMOS Imagers, having more than 60% worldwide market share in this field. Further information is available at www.inter-action.co.jp.
